CHRISCO DIGITAL ACADEMY | CHRISCO FELLOWSHIP OF CHURCHES

AI Literacy for Work & Productivity

"Use AI tools to work faster, learn quicker and get more done."

AI & Workplace Productivity Track | 5 Weeks | Beginner 28-Page Illustrated Edition

Prepared by CHRISCO Youth Aflame | chriscoyouthaflame2025@gmail.com

Course Foreword

AI is the biggest shift in work since the internet. The people who learn to use it are not being replaced, they are replacing the ones who refuse to. This book makes you one of the former, starting from zero, in plain language.

You do not need to understand how AI works inside, any more than you need to understand an engine to drive. You need to know what it is good at, where it lies, and how to direct it. That is exactly what these chapters give you.

THE PRACTITIONER PROMISE

No tech background needed. You will understand what AI can and cannot do, write prompts that get real results, and build a simple daily workflow that saves you hours.

Keep a device open and try each tool as you read. AI is learned by using, not by studying. Ten minutes of hands-on beats an hour of theory.

Published by CHRISCO Digital Academy under CHRISCO Youth Aflame (*CHRISCO Fellowship of Churches*), this expanded 28-page illustrated handbook unpacks every module in spacious detail with visual diagrams, real East African case studies, and step-by-step labs. Reach our mentorship desk anytime at chriscoyouthaflame2025@gmail.com.

Key Learning Outcomes

01

What AI is, and what it isn't: AI predicts language, it doesn't 'know' truth.

02

The skill of prompting: Include role, task, context and format.

03

AI for images, documents and data: AI makes design accessible to non-designers.

04

Use AI responsibly and safely: Turn tools into a written workflow.

Across 5 Weeks of structured practice, each of the 8 modules is given a dedicated two-page spread: first unpacking the concept visually, then walking through a real field scenario and hands-on lab.

By Module 08, you will have built and verified a complete AI workflow ready to serve employers, clients, ministries, and communities with excellence.

Table of Contents

Course Foreword & Key Outcomes 02

01 Foundations & Core Mindset (Modules 1 to 2) 05

02 Core Frameworks & Strategy (Modules 3 to 4) 10

03 Execution & Applied Mastery (Modules 5 to 6) 15

04 Scaling & Capstone Project (Modules 7 to 8) 20

05 Complete Syllabus & Fellowship Reflections 25

06 90-Day Action Plan & Stewardship 27

01
Foundations & Core Mindset

Module 01: What AI is, and what it isn't | Module 02: Your essential AI toolkit

MODULE 01 · PART 1

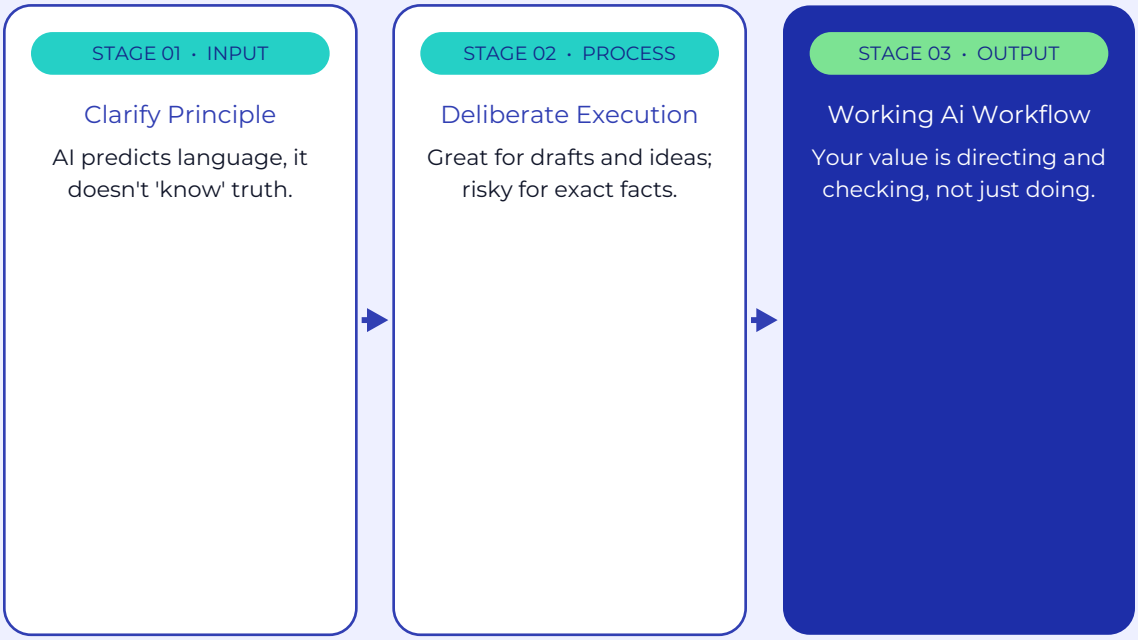

1.1 What AI is - and what it isn't

Modern AI tools like ChatGPT are, in simple terms, very advanced prediction machines. They have read enormous amounts of text and learned to predict what words should come next. That makes them brilliant at writing, summarising, explaining and brainstorming, and it also explains their biggest weakness: they can sound completely confident while being completely wrong.

So treat AI as a fast, tireless assistant, not an oracle. It is superb for first drafts, ideas, explanations and repetitive text work. It is unreliable for exact facts, recent events, numbers and anything where being wrong is costly. Your job shifts from doing all the work to directing the work and checking it. That is the skill that now pays.

Why This Principle Matters in Depth: Many learners read about *what ai is, and what it isn't* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that ai predicts language, it doesn't 'know' truth., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

VISUAL CONCEPT DIAGRAM · MODULE 01: WHAT AI IS - AND WHAT IT ISN'T

MODULE 01 · WORKED CASE STUDY

Real-World Scenario:
A student asked AI to summarise a topic in minutes, excellent. Then he asked it for a specific statistic and it invented a believable but false number. Lesson: use it for thinking and drafting, verify every hard fact elsewhere.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 01

Your Practical Task: Ask an AI tool to explain something you find hard, in simple terms. Then ask it for a specific fact and go verify that fact online. Feel the difference.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 01 Key Takeaways

01

AI predicts language, it doesn't 'know' truth.

02

Great for drafts and ideas; risky for exact facts.

03

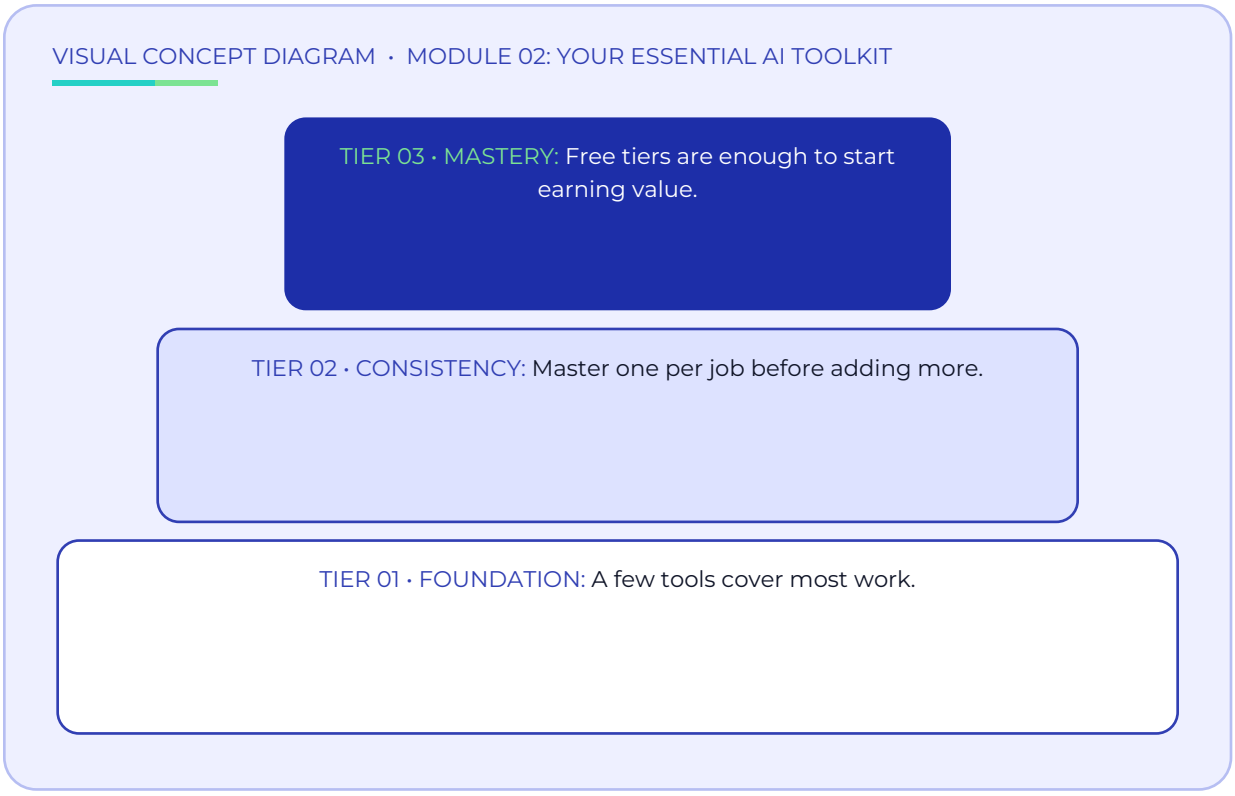

Your value is directing and checking, not just doing.

1.2 Your essential AI toolkit

You do not need dozens of tools, a few cover almost everything. A chat assistant (like ChatGPT or Gemini) for writing, thinking and explaining. An image generator for graphics. A design tool with built-in AI (like Canva) for posters and posts. A transcription or note tool to turn speech into text. Most have free tiers that are more than enough to start.

Pick one tool per job and get genuinely good at it before adding more. Chasing every new app is a trap that wastes time. Depth beats collection: a person who has truly mastered one chat assistant will out-produce someone who has lightly touched ten. Learn the one you have deeply.

Why This Principle Matters in Depth: Many learners read about *your essential ai toolkit* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that a few tools cover most work., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

MODULE 02 · WORKED CASE STUDY

Real-World Scenario:
A small business owner runs almost everything with two free tools: a chat assistant for captions, replies and ideas, and Canva for visuals. That simple pair replaced hours of work and a paid designer for basic needs.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 02

Your Practical Task: Choose one chat assistant and one design tool. Create a free account on each. Use each one for a real task today, not a test.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 02 Key Takeaways

01

A few tools cover most work.

02

Master one per job before adding more.

03

Free tiers are enough to start earning value.

02
Core Frameworks & Strategy

Module 03: The skill of prompting | Module 04: AI for writing and research

MODULE 03 · PART 1

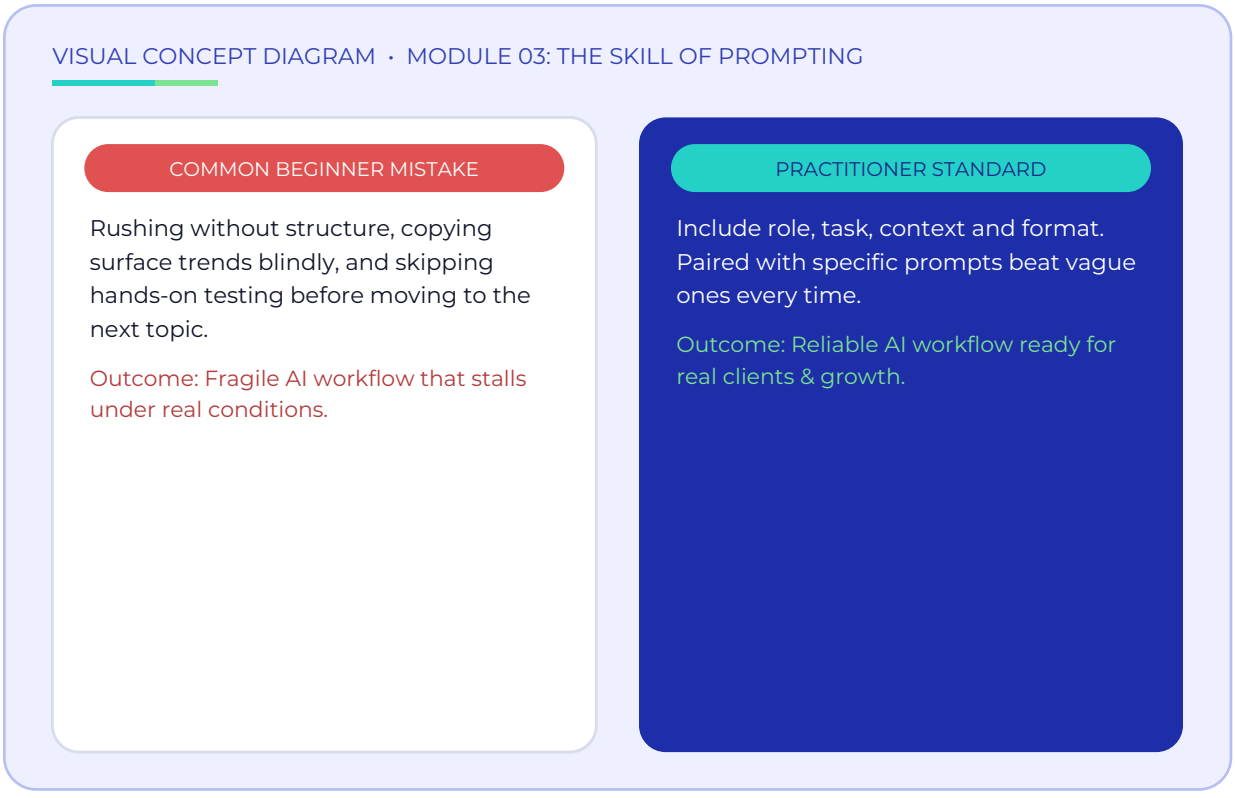

2.1 The skill of prompting

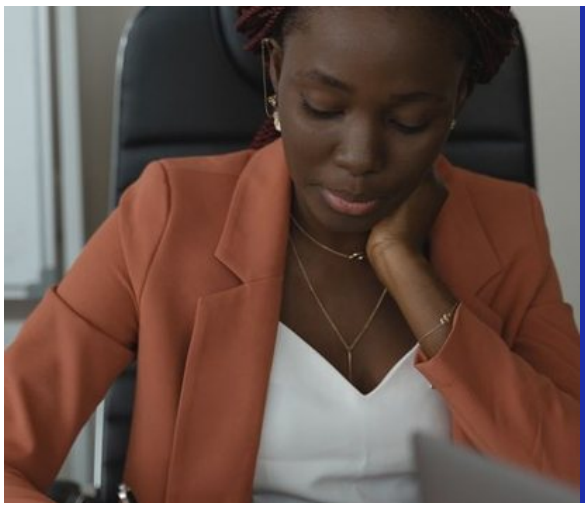

The quality of what AI gives you depends almost entirely on how you ask. A vague prompt gives vague results. A strong prompt has four parts: role ('act as a marketing expert'), task ('write three captions'), context ('for a Jinja bakery's new bread'), and format ('short, with emojis, under 20 words each'). The more you specify, the better the output.

Prompting is a conversation, not a single command. If the first answer is not right, do not give up, refine it: 'make it shorter', 'more formal', 'give me five more like the second one'. Treat AI like a smart intern who does exactly what you say, so learn to say it clearly, and to correct kindly and specifically.

Why This Principle Matters in Depth: Many learners read about *the skill of prompting* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that include role, task, context and format., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

VISUAL CONCEPT DIAGRAM · MODULE 03: THE SKILL OF PROMPTING

MODULE 03 · WORKED CASE STUDY

Real-World Scenario:
Weak: 'write about farming.' Strong: 'Act as an agriculture officer. Write a simple 150-word WhatsApp message for Ugandan maize farmers explaining three ways to reduce post-harvest loss, in encouraging plain English.' The second prompt gets something you can actually use.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 03

Your Practical Task: Take a task you have. Write a prompt with all four parts (role, task, context, format). Then refine the answer twice with follow-up instructions.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 03 Key Takeaways

01

Include role, task, context and format.

02

Specific prompts beat vague ones every time.

03

Refine in conversation, don't accept the first draft.

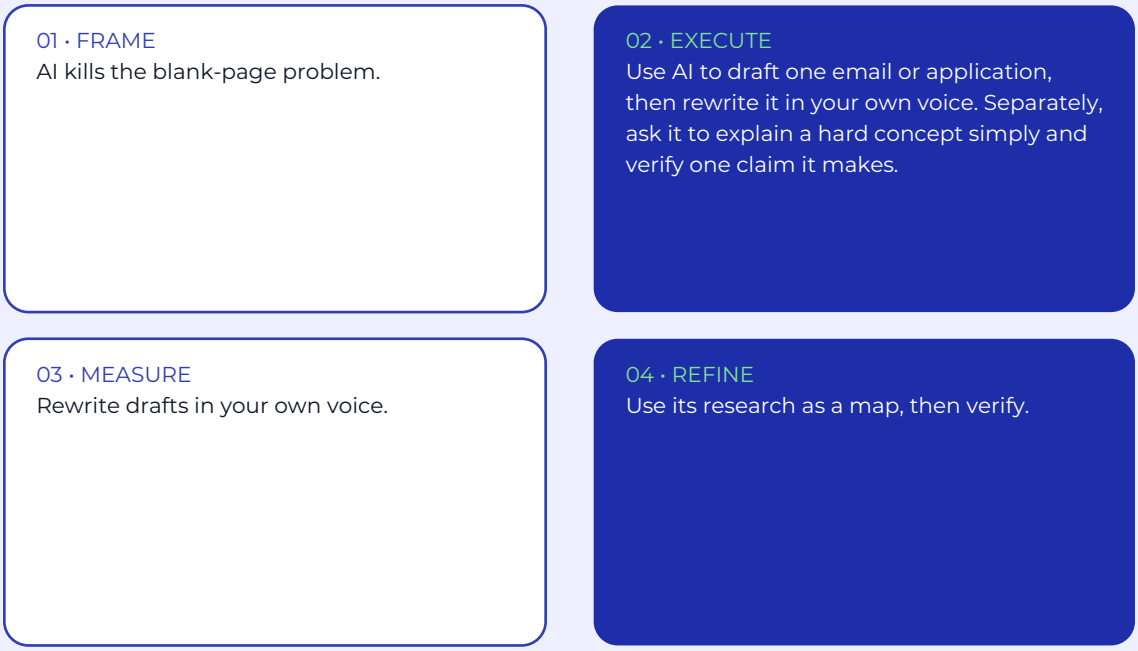

2.2 AI for writing and research

AI removes the terror of the blank page. Use it to draft emails, reports, applications, captions and messages in seconds, then edit for your voice and facts. It is also a patient explainer: paste something you do not understand and ask it to explain like you are twelve, then ask follow-up questions until it clicks. This alone can accelerate your learning enormously.

For research, use AI to get oriented fast, to outline a topic, list what you should look into, or summarise a long document. But because it can invent sources and facts, treat its research as a starting map, not the destination. Confirm anything important with a real, trusted source before you rely on it.

Why This Principle Matters in Depth: Many learners read about *ai for writing and research* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that ai kills the blank-page problem., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

VISUAL CONCEPT DIAGRAM · MODULE 04: AI FOR WRITING AND RESEARCH

MODULE 04 · WORKED CASE STUDY

Real-World Scenario:
Applying for an opportunity, a learner drafted her application with AI in ten minutes, then rewrote it in her own words with her real story. The AI beat the blank page; her humanity won the place.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 04

Your Practical Task: Use AI to draft one email or application, then rewrite it in your own voice. Separately, ask it to explain a hard concept simply and verify one claim it makes.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 04 Key Takeaways

01

AI kills the blank-page problem.

02

Rewrite drafts in your own voice.

03

Use its research as a map, then verify.

03
Execution & Applied Mastery

Module 05: AI for images, documents and data | Module 06: Automate the boring, repetitive work

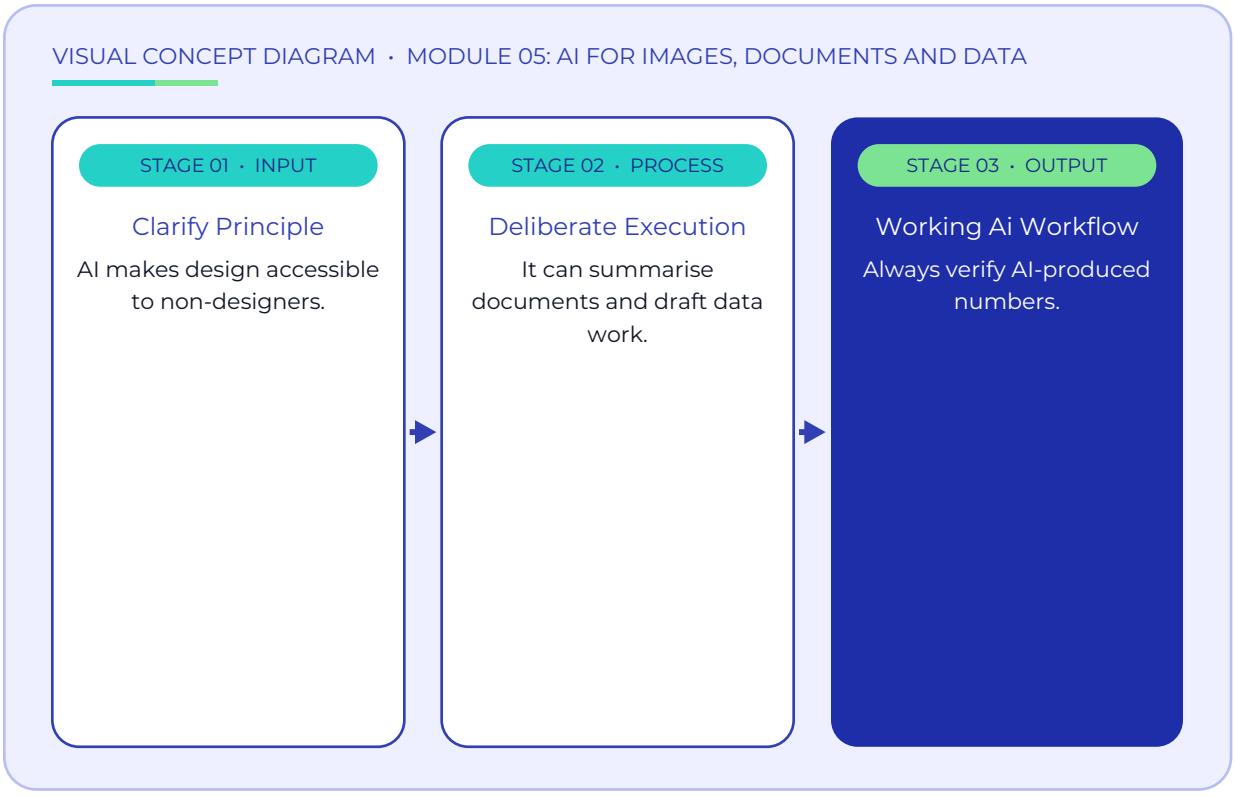

MODULE 05 · PART 1

3.1 AI for images, documents and data

Beyond words, AI can create and edit images from a text description, remove backgrounds, design social posts, and generate simple graphics, work that used to need a designer or expensive software. Tools like Canva put much of this behind one button. For a small business or a job seeker, this means professional-looking materials at zero cost.

AI can also lighten document and data work: summarising long PDFs, drafting spreadsheets and formulas, cleaning up messy text, and turning notes into slides. Describe what you want in plain language. You still need to check the output, especially numbers, but the heavy first pass is done for you in seconds.

Why This Principle Matters in Depth: Many learners read about *ai for images, documents and data* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that ai makes design accessible to non-designers., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

MODULE 05 · WORKED CASE STUDY

Real-World Scenario:
A youth group needed a flyer and had no designer and no budget. Using Canva's AI, they described the event and had a clean, printable poster in fifteen minutes, something that once cost money and days.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 05

Your Practical Task: Create one image or poster with an AI design tool, and use AI to summarise one long document into five bullet points. Check the summary for accuracy.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 05 Key Takeaways

01

AI makes design accessible to non-designers.

02

It can summarise documents and draft data work.

03

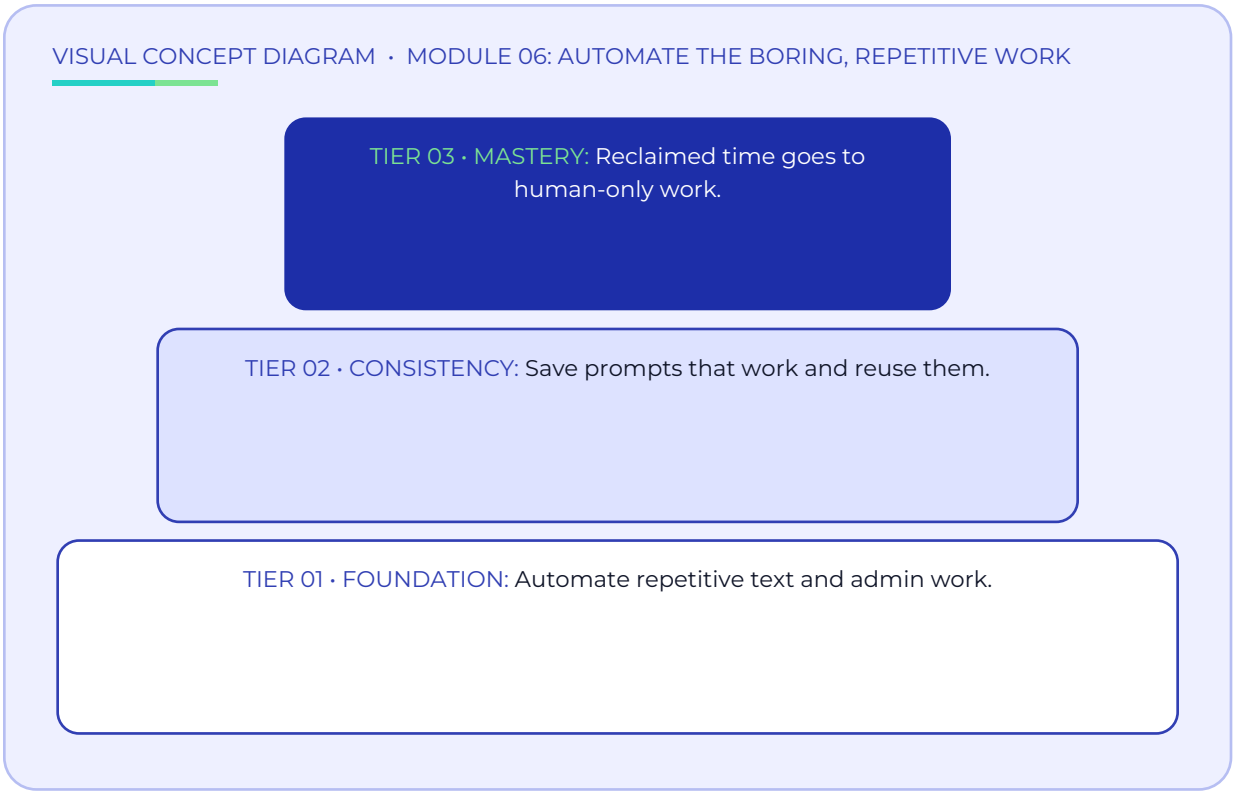

Always verify AI-produced numbers.

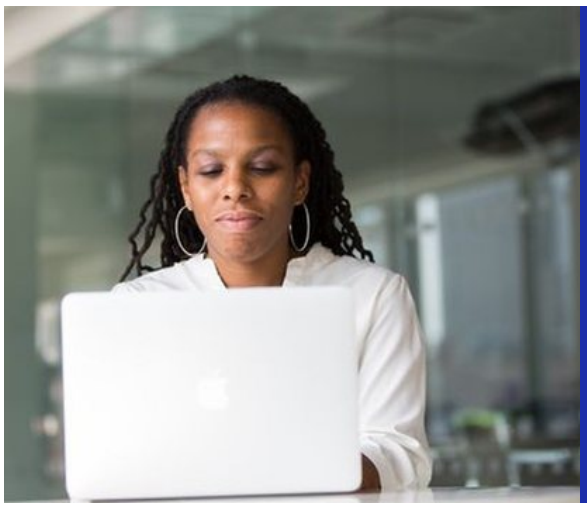

3.2 Automate the boring, repetitive work

The real productivity leap is using AI for the repetitive tasks that eat your day: standard replies, weekly reports, turning meeting notes into action lists, drafting the same kinds of messages over and over. Build reusable prompts, save the ones that work so you can paste and adjust them instead of starting fresh each time.

Think in templates. If you write similar things weekly, create a strong prompt once and reuse it forever. Over a month, ten minutes saved daily is hours returned to you, time you can spend on the work only a human can do: relationships, judgement, and creativity. Let AI handle the routine so you handle the valuable.

Why This Principle Matters in Depth: Many learners read about *automate the boring, repetitive work* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that automate repetitive text and admin work., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

MODULE 06 · WORKED CASE STUDY

Real-World Scenario:
A freelancer saved a set of prompts, for proposals, follow-ups and invoices reminders. What used to take an hour of writing now takes five minutes of pasting and tweaking. Same quality, a fraction of the time.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 06

Your Practical Task: Identify one task you repeat weekly. Write one reusable prompt for it and save it somewhere easy to find. Use it next time instead of starting over.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 06 Key Takeaways

01

Automate repetitive text and admin work.

02

Save prompts that work and reuse them.

03

Reclaimed time goes to human-only work.

04
Scaling, Capstone & Excellence

Module 07: Use AI responsibly and safely | Module 08: Build your AI productivity workflow

MODULE 07 · PART 1

4.1 Use AI responsibly and safely

With power comes responsibility. Never paste truly private or sensitive information, passwords, ID numbers, confidential client data, into public AI tools; you cannot always control where it goes. Be honest about AI use where honesty matters, such as schoolwork or client deliverables, and always do the final thinking yourself so your own judgement keeps growing.

Guard against two traps. First, misinformation: AI can be confidently wrong, so verify anything that matters. Second, dependence: if you let AI do all your thinking, your own skills weaken. Use it as a bicycle for the mind, it should help you go further under your own power, not replace your legs entirely.

Why This Principle Matters in Depth: Many learners read about *use ai responsibly and safely* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that never share sensitive data with public ai., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

VISUAL CONCEPT DIAGRAM · MODULE 07: USE AI RESPONSIBLY AND SAFELY

MODULE 07 · WORKED CASE STUDY

Real-World Scenario:
A worker almost sent an AI-drafted report full of invented figures to his boss. A five-minute check caught it. The tool saved him writing time but nearly cost him his credibility, verification is not optional.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 07

Your Practical Task: Write your own two personal AI rules (for example: 'never paste private data' and 'always verify facts before sending'). Stick them where you work.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 07 Key Takeaways

01

Never share sensitive data with public AI.

02

Verify, AI can be confidently wrong.

03

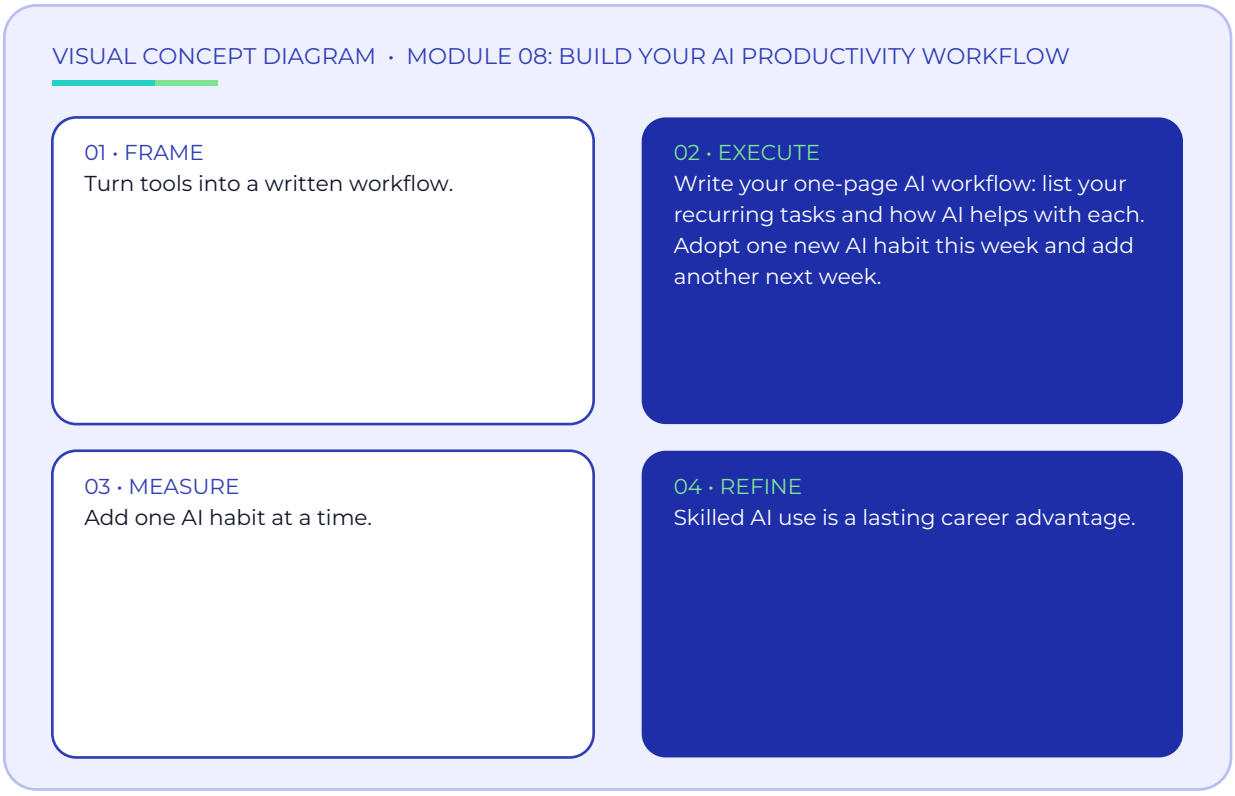

Use AI to grow your skills, not replace them.

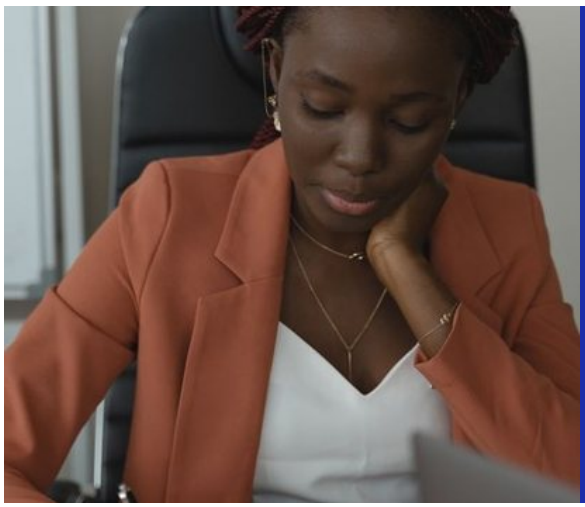

4.2 Build your AI productivity workflow

Now make it a system. Look at your typical day or week and decide, for each recurring task, whether AI can draft it, speed it up, or check it. Write a simple personal workflow: 'Mornings, AI drafts my messages and plans my day. Work, I use it to explain and research. Evening, I use it to summarise and prepare tomorrow.' A plan turns tools into habits.

Start small and let it grow. Add one AI habit at a time until it is second nature, then add another. Within a month you will work noticeably faster than peers who never bothered to learn this. In a world adopting AI quickly, being the person who genuinely knows how to use it well is a quiet, powerful advantage.

Why This Principle Matters in Depth: Many learners read about *build your ai productivity workflow* at a surface level, yet struggle when building a real AI workflow. Notice the underlying logic: when you anchor your work around the rule that turn tools into a written workflow., you remove guesswork and build repeatable confidence. Take time to study the visual concept diagram below before moving to the worked case study on the next page.

MODULE 08 · WORKED CASE STUDY

Real-World Scenario:
A learner built a one-page AI routine and stuck to it. Two months later she was finishing work in half the time and had become the person friends and colleagues asked for AI help, which itself opened new opportunities.

How to Apply This Lesson Step by Step

Look closely at why the example above succeeded: instead of waiting for perfect conditions, the practitioner focused on one concrete deliverable and tested it in the real world. Use the guided assignment below to build the exact same muscle in your own AI Literacy for Work & Productivity workbook.

HANDS-ON LAB ASSIGNMENT · MODULE 08

Your Practical Task: Write your one-page AI workflow: list your recurring tasks and how AI helps with each. Adopt one new AI habit this week and add another next week.

Self-Check Before Moving On: Write down what worked, what felt unclear, and one specific improvement you will make on your second repetition. Competence comes from completed reps, never passive reading.

Module 08 Key Takeaways

01

Turn tools into a written workflow.

02

Add one AI habit at a time.

03

Skilled AI use is a lasting career advantage.

5.1 Complete 8-Module Practice & Competency Matrix

Review every module in AI Literacy for Work & Productivity using the table below. Check off each module only after you have completed its hands-on assignment and verified your work against the core principle.

Module	Focus Topic	Core Principle	Workbook Check
Module 01	What AI is, and what it isn't	AI predicts language, it doesn't 'know' truth.	Completed [ ]
Module 02	Your essential AI toolkit	A few tools cover most work.	Completed [ ]
Module 03	The skill of prompting	Include role, task, context and format.	Completed [ ]
Module 04	AI for writing and research	AI kills the blank-page problem.	Completed [ ]
Module 05	AI for images, documents and data	AI makes design accessible to non-designers.	Completed [ ]
Module 06	Automate the boring, repetitive work	Automate repetitive text and admin work.	Completed [ ]
Module 07	Use AI responsibly and safely	Never share sensitive data with public AI.	Completed [ ]
Module 08	Build your AI productivity workflow	Turn tools into a written workflow.	Completed [ ]

CAPSTONE PORTFOLIO STANDARD

Before graduating from this handbook, combine all eight modules into one finished, shareable AI workflow: *Write your one-page AI workflow: list your recurring tasks and how AI helps with each. Adopt one new AI habit this week and add another next week.* When ready for mentor feedback, email your work to chriscoyouthaflame2025@gmail.com.

5.2 Applied Fellowship Case Reflections

Real transformation happens when learners turn theory into consistent service. Reflect on these cohort case highlights from across East Africa as you prepare your own project:

"A student asked AI to summarise a topic in minutes, excellent. Then he asked it for a specific statistic and it invented a believable but false number. Lesson: use it for thinking and drafting, verify every hard fact elsewhere."

Cohort Case Reflection | Starting Strong in Module 01

"Applying for an opportunity, a learner drafted her application with AI in ten minutes, then rewrote it in her own words with her real story. The AI beat the blank page; her humanity won the place."

Mid-Course Breakthrough | Applying Strategy in Module 04

"A learner built a one-page AI routine and stuck to it. Two months later she was finishing work in half the time and had become the person friends and colleagues asked for AI help, which itself opened new opportunities."

Capstone Completion | Shipping Real Work in Module 08

Stewardship Principle: "Whatever your hand finds to do, do it with excellence, integrity, and faithfulness so your skill becomes a blessing to many."

06 90-Day Action Roadmap

True mastery in AI Literacy for Work & Productivity is measured by what you build, ship, and steward after finishing the lessons. Follow this structured 90-day implementation plan developed by CHRISCO Youth Aflame (under CHRISCO Fellowship of Churches) to turn study into fruitfulness.

6.1 Four-Stage Post-Course Milestones

01

Days 1 to 14: Foundation Sprint

Complete Modules 1 to 4 labs and document your baseline specimen in AI Literacy for Work & Productivity.

02

Days 15 to 30: First Live Output

Complete Modules 5 to 8 and ship your first real capstone deliverable: Write your one-page AI workflow: list your recurring tasks and how AI helps with each. Adopt one new AI habit this week and add another next week.

03

Days 31 to 60: Feedback & Iteration

Share your work with a mentor, peer, or real client/community audience and refine weak points.

04

Days 61 to 90: Service & Multiplication

Use your skill to serve your church, business, or clients faithfully and mentor one younger learner.

Follow-Up Stage	CHRISCO Support Channel	Contact & Cadence
Workbook Review	CHRISCO Digital Academy Desk	chriscoyouthaflame2025@gmail.com
Capstone Submission	CHRISCO Youth Aflame Mentors	shambetz@gmail.com
Peer Accountability	CHRISCO Fellowship Study Hubs	Monthly Cohort Check-In
