CHRISCO DIGITAL ACADEMY | CHRISCO FELLOWSHIP OF CHURCHES

AI Literacy for Work & Productivity

"Use AI tools to work faster, learn quicker and get more done."

AI & Workplace Productivity Track | 5 Weeks | Beginner

Self-Paced Study Edition

Prepared by CHRISCO Youth Aflame | chriscoyouthaflame2025@gmail.com

Course Foreword

AI is the biggest shift in work since the internet. The people who learn to use it are not being replaced, they are replacing the ones who refuse to. This book makes you one of the former, starting from zero, in plain language.

You do not need to understand how AI works inside, any more than you need to understand an engine to drive. You need to know what it is good at, where it lies, and how to direct it. That is exactly what these chapters give you.

THE PRACTITIONER PROMISE

No tech background needed. You will understand what AI can and cannot do, write prompts that get real results, and build a simple daily workflow that saves you hours.

Keep a device open and try each tool as you read. AI is learned by using, not by studying. Ten minutes of hands-on beats an hour of theory.

Published by CHRISCO Digital Academy under CHRISCO Youth Aflame (*CHRISCO Fellowship of Churches*), this 8-module workbook equips youth and emerging leaders with practical, ethical, income-ready skills. Complete every chapter drill in a dedicated workbook and reach our mentorship desk anytime at chriscoyouthaflame2025@gmail.com.

Key Outcomes

01

What AI is, and what it isn't: AI predicts language, it doesn't 'know' truth.

02

The skill of prompting: Include role, task, context and format.

03

AI for images, documents and data: AI makes design accessible to non-designers.

04

Use AI responsibly and safely: Turn tools into a written workflow.

Across 5 Weeks of structured practice, learners progress from core principles to real-world execution. Every module pairs concise frameworks with an immediate hands-on drill so knowledge turns into demonstrable competence.

Graduates finish with a tangible portfolio deliverable in AI Literacy for Work & Productivity, ready to serve clients, employers, ministries, and communities with excellence and integrity.

Table of Contents

Course Foreword & Key Outcomes 02

01 Foundations & Core Mindset 05

02 Core Frameworks & Strategy 07

03 Execution & Applied Mastery 10

04 Scaling, Capstone & Excellence 12

05 8-Module Syllabus & Drill Matrix 14

06 90-Day Action Plan & Stewardship 15

01
Foundations & Core Mindset

Module 1: What AI is, and what it isn't | Module 2: Your essential AI toolkit

1.1 What AI is - and what it isn't

Modern AI tools like ChatGPT are, in simple terms, very advanced prediction machines. They have read enormous amounts of text and learned to predict what words should come next. That makes them brilliant at writing, summarising, explaining and brainstorming, and it also explains their biggest weakness: they can sound completely confident while being completely wrong.

So treat AI as a fast, tireless assistant, not an oracle. It is superb for first drafts, ideas, explanations and repetitive text work. It is unreliable for exact facts, recent events, numbers and anything where being wrong is costly. Your job shifts from doing all the work to directing the work and checking it. That is the skill that now pays.

Real-World Example: A student asked AI to summarise a topic in minutes, excellent. Then he asked it for a specific statistic and it invented a believable but false number. Lesson: use it for thinking and drafting, verify every hard fact elsewhere.

Hands-On Practice: Ask an AI tool to explain something you find hard, in simple terms. Then ask it for a specific fact and go verify that fact online. Feel the difference.

Core Takeaways: AI predicts language, it doesn't 'know' truth. • Great for drafts and ideas; risky for exact facts. • Your value is directing and checking, not just doing.

1.2 Your essential AI toolkit

You do not need dozens of tools, a few cover almost everything. A chat assistant (like ChatGPT or Gemini) for writing, thinking and explaining. An image generator for graphics. A design tool with built-in AI (like Canva) for posters and posts. A transcription or note tool to turn speech into text. Most have free tiers that are more than enough to start.

Pick one tool per job and get genuinely good at it before adding more. Chasing every new app is a trap that wastes time. Depth beats collection: a person who has truly mastered one chat assistant will out-produce someone who has lightly touched ten. Learn the one you have deeply.

01

Practitioner Case

A small business owner runs almost everything with two free tools: a chat assistant for captions, replies and ideas, and Canva for visuals. That simple pair replaced hours of work and a paid designer for basic needs.

02

Action Drill

Choose one chat assistant and one design tool. Create a free account on each. Use each one for a real task today, not a test.

03

Key Standard

A few tools cover most work. Master one per job before adding more. Free tiers are enough to start earning value.

02
Core Frameworks & Strategy

Module 3: The skill of prompting | Module 4: AI for writing and research

2.1 The skill of prompting

The quality of what AI gives you depends almost entirely on how you ask. A vague prompt gives vague results. A strong prompt has four parts: role ('act as a marketing expert'), task ('write three captions'), context ('for a Jinja bakery's new bread'), and format ('short, with emojis, under 20 words each'). The more you specify, the better the output.

Prompting is a conversation, not a single command. If the first answer is not right, do not give up, refine it: 'make it shorter', 'more formal', 'give me five more like the second one'. Treat AI like a smart intern who does exactly what you say, so learn to say it clearly, and to correct kindly and specifically.

Core Principle

Include role, task, context and format.

Field Case Study

Weak: 'write about farming.' Strong: 'Act as an agriculture officer. Write a simple 150-word WhatsApp message for Ugandan maize farmers explaining three ways to reduce post-harvest loss, in encouraging plain English.' The second prompt gets something you can actually use.

Applied Exercise

Take a task you have. Write a prompt with all four parts (role, task, context, format). Then refine the answer twice with follow-up instructions.

Mastery Check

Specific prompts beat vague ones every time. · Refine in conversation, don't accept the first draft.

2.2 Three-Step Execution Rhythm

Step 1

Prepare & Frame
Include role, task, context and format.

Practice Focus
Audit your current approach before acting.

Step 2

Execute Deliberately
Specific prompts beat vague ones every time.

Practice Focus
Focus on clarity, calm pace, and measurable value.

Step 3

Review & Refine
Refine in conversation, don't accept the first draft.

Practice Focus
Record outcomes and sharpen one habit per rep.

2.3 AI for writing and research

AI removes the terror of the blank page. Use it to draft emails, reports, applications, captions and messages in seconds, then edit for your voice and facts. It is also a patient explainer: paste something you do not understand and ask it to explain like you are twelve, then ask follow-up questions until it clicks. This alone can accelerate your learning enormously.

For research, use AI to get oriented fast, to outline a topic, list what you should look into, or summarise a long document. But because it can invent sources and facts, treat its research as a starting map, not the destination. Confirm anything important with a real, trusted source before you rely on it.

01

AI kills the blank-page problem.

02

Rewrite drafts in your own voice.

03

Use its research as a map, then verify.

2.4 Real-World Case & Lab Assignment

Practitioner Case Study

Applying for an opportunity, a learner drafted her application with AI in ten minutes, then rewrote it in her own words with her real story. The AI beat the blank page; her humanity won the place.

Your Practical Assignment

Use AI to draft one email or application, then rewrite it in your own voice. Separately, ask it to explain a hard concept simply and verify one claim it makes.

CHRISCO Youth Aflame Study Principle: "AI kills the blank-page problem. Consistent execution in small daily assignments builds authority that cannot be faked."

03
Execution & Applied Mastery

Module 5: AI for images, documents and data | Module 6: Automate the boring, repetitive work

3.1 AI for images, documents and data

Beyond words, AI can create and edit images from a text description, remove backgrounds, design social posts, and generate simple graphics, work that used to need a designer or expensive software. Tools like Canva put much of this behind one button. For a small business or a job seeker, this means professional-looking materials at zero cost.

AI can also lighten document and data work: summarising long PDFs, drafting spreadsheets and formulas, cleaning up messy text, and turning notes into slides. Describe what you want in plain language. You still need to check the output, especially numbers, but the heavy first pass is done for you in seconds.

Case: A youth group needed a flyer and had no designer and no budget. Using Canva's AI, they described the event and had a clean, printable poster in fifteen minutes, something that once cost money and days.

Action Drill: Create one image or poster with an AI design tool, and use AI to summarise one long document into five bullet points. Check the summary for accuracy.

3.2 Automate the boring, repetitive work

The real productivity leap is using AI for the repetitive tasks that eat your day: standard replies, weekly reports, turning meeting notes into action lists, drafting the same kinds of messages over and over. Build reusable prompts, save the ones that work so you can paste and adjust them instead of starting fresh each time.

Think in templates. If you write similar things weekly, create a strong prompt once and reuse it forever. Over a month, ten minutes saved daily is hours returned to you, time you can spend on the work only a human can do: relationships, judgement, and creativity. Let AI handle the routine so you handle the valuable.

Case: A freelancer saved a set of prompts, for proposals, follow-ups and invoices reminders. What used to take an hour of writing now takes five minutes of pasting and tweaking. Same quality, a fraction of the time.

Action Drill: Identify one task you repeat weekly. Write one reusable prompt for it and save it somewhere easy to find. Use it next time instead of starting over.

04
Scaling, Capstone & Excellence

Module 7: Use AI responsibly and safely | Module 8: Build your AI productivity workflow

4.1 Use AI responsibly and safely

With power comes responsibility. Never paste truly private or sensitive information, passwords, ID numbers, confidential client data, into public AI tools; you cannot always control where it goes. Be honest about AI use where honesty matters, such as schoolwork or client deliverables, and always do the final thinking yourself so your own judgement keeps growing.

Guard against two traps. First, misinformation: AI can be confidently wrong, so verify anything that matters. Second, dependence: if you let AI do all your thinking, your own skills weaken. Use it as a bicycle for the mind, it should help you go further under your own power, not replace your legs entirely.

Field Example: A worker almost sent an AI-drafted report full of invented figures to his boss. A five-minute check caught it. The tool saved him writing time but nearly cost him his credibility, verification is not optional. | Drill: Write your own two personal AI rules (for example: 'never paste private data' and 'always verify facts before sending'). Stick them where you work.

4.2 Build your AI productivity workflow (Capstone)

Now make it a system. Look at your typical day or week and decide, for each recurring task, whether AI can draft it, speed it up, or check it. Write a simple personal workflow: 'Mornings, AI drafts my messages and plans my day. Work, I use it to explain and research. Evening, I use it to summarise and prepare tomorrow.' A plan turns tools into habits.

Start small and let it grow. Add one AI habit at a time until it is second nature, then add another. Within a month you will work noticeably faster than peers who never bothered to learn this. In a world adopting AI quickly, being the person who genuinely knows how to use it well is a quiet, powerful advantage.

Competency Area	Capstone Standard	Starting	Target Mastery
1. Clarity & Preparation	Never share sensitive data with public AI.	Needs Draft	Confident & Ready
2. Execution Quality	Turn tools into a written workflow.	In Practice	Portfolio-Grade
3. Real-World Proof	Write your one-page AI workflow: list your recurring tasks and how AI helps with each. Adopt one new AI habit this week and add another next week.	Planned	Completed & Reviewed
4. Consistency Habit	Skilled AI use is a lasting career advantage.	Occasional	Weekly Discipline

5.1 Complete 8-Module Practice Matrix

Use this checklist to track every hands-on assignment in AI Literacy for Work & Productivity from Module 1 to your final project:

Module	Focus Topic	Core Deliverable & Principle
Module 01	What AI is, and what it isn't	AI predicts language, it doesn't 'know' truth.
Module 02	Your essential AI toolkit	A few tools cover most work.
Module 03	The skill of prompting	Include role, task, context and format.
Module 04	AI for writing and research	AI kills the blank-page problem.
Module 05	AI for images, documents and data	AI makes design accessible to non-designers.
Module 06	Automate the boring, repetitive work	Automate repetitive text and admin work.
Module 07	Use AI responsibly and safely	Never share sensitive data with public AI.
Module 08	Build your AI productivity workflow	Turn tools into a written workflow.

5.2 Applied Fellowship Reflections

"A student asked AI to summarise a topic in minutes, excellent. Then he asked it for a specific statistic and it invented a believable but false number. Lesson: use it for thinking and drafting, verify every hard fact elsewhere."

CHRISCO Youth Aflame Cohort Case Note | Module 01

"A learner built a one-page AI routine and stuck to it. Two months later she was finishing work in half the time and had become the person friends and colleagues asked for AI help, which itself opened new opportunities."

CHRISCO Digital Academy Capstone Highlight | Module 08

06 90-Day Action Roadmap

True mastery in AI Literacy for Work & Productivity is measured by what you build, ship, and steward after finishing the lessons. Follow this structured 90-day implementation plan developed by CHRISCO Youth Aflame (under CHRISCO Fellowship of Churches) to turn study into fruitfulness.

6.1 Four-Stage Post-Course Milestones

01

Days 1 to 14: Foundation Sprint

Complete Modules 1 to 4 drills and document your baseline specimen in AI Literacy for Work & Productivity.

02

Days 15 to 30: First Live Output

Complete Modules 5 to 8 and ship your first real capstone deliverable: Write your one-page AI workflow: list your recurring tasks and how AI helps with each. Adopt one new AI habit this week and add another next week.

03

Days 31 to 60: Feedback & Iteration

Share your work with a mentor, peer, or real client/community audience and refine weak points.

04

Days 61 to 90: Service & Multiplication

Use your skill to serve your church, business, or clients faithfully and mentor one younger learner.

Follow-Up Stage	CHRISCO Support Channel	Contact & Cadence
Workbook Review	CHRISCO Digital Academy Desk	chriscoyouthaflame2025@gmail.com
Capstone Submission	CHRISCO Youth Aflame Mentors	shambetz@gmail.com
Peer Accountability	CHRISCO Fellowship Study Hubs	Monthly Cohort Check-In
